## 1 Introduction

---

This package is designed for reactome pathway-based analysis. Reactome is an open-source, open access, manually curated and peer-reviewed pathway database.

## 2 Pathway Enrichment Analysis

---

Enrichment analysis is a widely used approach to identify biological themes. Here, we implement hypergeometric model to assess whether the number of selected genes associated with reactome pathway is larger than expected. The p values were calculated based the hypergeometric model [1],

```
require(DOSE)
data(geneList)
de <- names(geneList)[abs(geneList) > 1]
head(de)
```

```
## [1] "4312" "8318" "10874" "55143" "55388" "991"

require(ReactomePA)
x <- enrichPathway(gene = de, pvalueCutoff = 0.05,
  readable = T)

## Loading required package: org.Hs.eg.db
## Warning in grep(org, p): input string 1 is invalid in this locale

head(summary(x))

##           ID                Description GeneRatio  BgRatio

## 2.1 Visualize enrichment result

We implement bar plot, enrichment map and category-gene-network for visualization. It is very common to visualize the enrichment result in bar or pie chart. We believe the pie chart is misleading and only provide bar chart.

```
barplot(x, showCategory = 8)
```

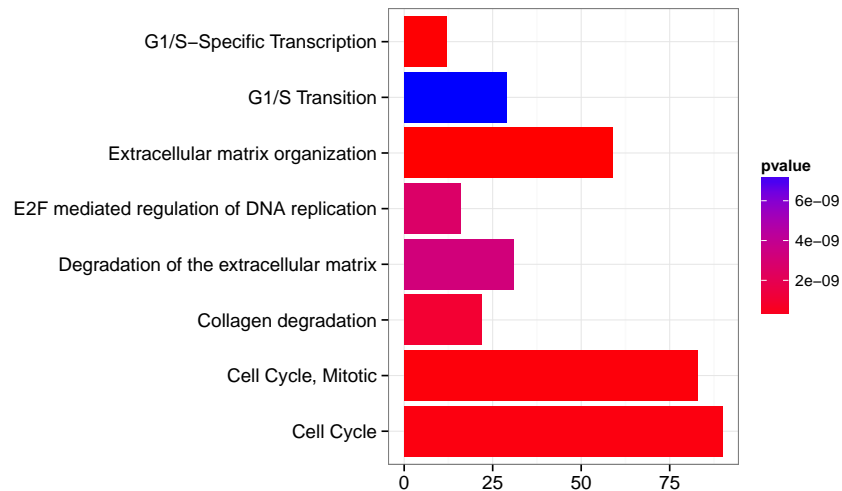

Figure 1: barplot of Reactome Pathway enrichment result.

Enrichment map can be visualized by `enrichMap` :

```
enrichMap(x)
```

In order to consider the potentially biological complexities in which a gene may belong to multiple annotation categories, we developed `cnetplot` function to extract the complex association between genes and diseases.

```
cnetplot(x, categorySize = "pvalue", foldChange = geneList)
```

## 2.2 Comparing enriched reactome pathways among gene clusters with clusterProfiler

We have developed an R package *clusterProfiler* [2] for comparing biological themes among gene clusters. *ReactomePA* works fine with *clusterProfiler* and can compare biological themes at reactome pathway perspective.

```
require(clusterProfiler)
data(gcSample)
res <- compareCluster(gcSample, fun = "enrichPathway")

## Warning in grep(org, p): input string 1 is invalid in this locale

plot(res)
```

Figure 2: enrichment map of enrichment result

### 3 Gene Set Enrichment Analysis

A common approach in analyzing gene expression profiles was identifying differential expressed genes that are deemed interesting. The `enrichPathway` function we demonstrated previously were based on these differential expressed genes. This approach will find genes where the difference is large, but it will not detect a situation where the difference is small, but evidenced in coordinated way in a set of related genes. Gene Set Enrichment Analysis (GSEA) directly addressed this limitation. All genes can be used in GSEA; GSEA aggregates the per gene statistics across genes within a gene set, therefore making it possible to detect situations where all genes in a predefined set change in a small but coordinated way.

```
y <- gsePathway(geneList, nPerm = 100, minGSSize = 120,
  pvalueCutoff = 0.05, pAdjustMethod = "BH", verbose = FALSE)
res <- summary(y)
head(res)
```

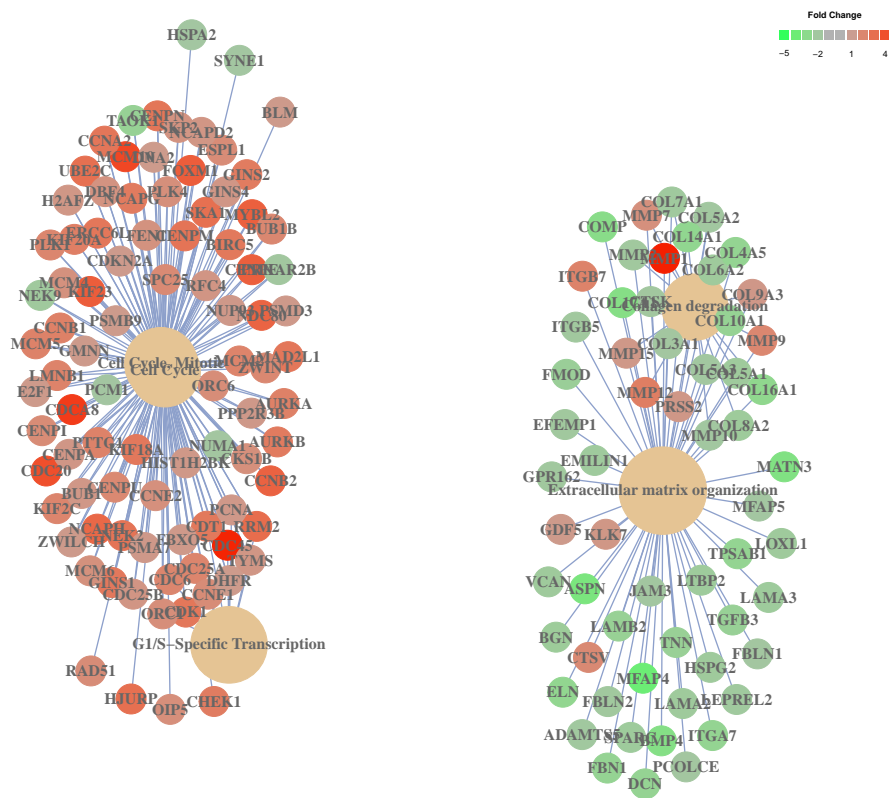

Figure 3: cnetplot of Reactome Pathway enrichment result.

##	ID	Description	setSize	enrichmentScore
##	68882	Mitotic Anaphase	158	0.653
##	68886	M Phase	237	0.633
##	69278	Cell Cycle, Mitotic	393	0.622
##	71291	Metabolism of amino acids and derivatives	168	0.329
##	109581	Apoptosis	145	0.428
##	162906	HIV Infection	191	0.466
##	pvalue	p.adjust	qvalues	
##	68882	0	0	0
##	68886	0	0	0
##	69278	0	0	0
##	71291	0	0	0
##	109581	0	0	0
##	162906	0	0	0

### 3.1 Visualize GSEA result

Figure 4: ReactomePA with clusterProfiler.

```
enrichMap(y)
```

```
gseaplot(y, geneSetID = "1280215")
```

## 4 Pathway Visualization

In *ReactomePA*, we also implemented `viewPathway` to visualize the pathway.

```
viewPathway("E2F mediated regulation of DNA replication",
  readable = TRUE, foldChange = geneList)
```

```
## Loading required package: graphite
```

## 5 Session Information

The version number of R and packages loaded for generating the vignette were:

- R version 3.1.2 (2014-10-31), x86\_64-unknown-linux-gnu
- Locale: LC\_CTYPE=en\_US.UTF-8, LC\_NUMERIC=C, LC\_TIME=en\_US.UTF-8, LC\_COLLATE=C, LC\_MONETARY=en\_US.UTF-8, LC\_MESSAGES=en\_US.UTF-8, LC\_PAPER=en\_US.UTF-8, LC\_NAME=C, LC\_ADDRESS=C, LC\_TELEPHONE=C, LC\_MEASUREMENT=en\_US.UTF-8, LC\_IDENTIFICATION=C
